                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response transplantation. The modified annexin can effectively chelate a radiounclide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In outset to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.

                                                                                                                                                                                                                                                     The present sequence is a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombl or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionuclide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MACGCGHMAQVLRGTVTDFPGFDERADAETLRKAMKGLGTDEESILTLLTSRSNAQRQEI

                                                                                                                                                        The present sequence is a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response tro a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionuclide and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                    This vascular anti-coagulating protein (VAC)-alpha is used in the preparation of monoclonal antibodies (MAbs). The VAC-alpha is injected into a host animal, in conjugation with eak sevice the animal, in conjugation with eak sevice the accordance immunised hosts are then fused with myeloma cells. The resultant hybridomas (VAA-8 and VAA-9) produce Abs specific to VAC-alpha. Abs can be used as immunossay reagents to detect VAC proteins, as affinity ligands for protein purificm, and as medicaments for binding and/or neutralising VAC proteins in vivo. See also AAN91354 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents an example of a protein of the invention. The proteins are bifunctional Aequorea victoria green fluorescent protein (GFP)-annexin fusion proteins, where the GFP and annexin moieties provide greater or equal fluorescent intensity and anionic phospholipid binding affinity, respectively, than do the corresponding unfused GFP and annexin proteins. An early manifestation of apoptosis is the loss of the proteins. An early manifestation of postmam membrane phospholipids, which results in exposure of anionic phospholipids on the extracellular leaflet of the plasma membrane. The GFP-annexin V fusion proteins are used for the detection of apoptotic cells by flow cytometry or fluorescent microscopy. The fusion proteins provide for homogeneously labelled annexin, with fluorescence properties that do not change upon binding membrane phospholipids, unlike prior art FITC-labelled annexins, where quenching of FITC-annexin V fluorescence by 40-50% occurs upon binding phospholipid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents an annexin polypeptide. The domain cannexin, which may be modified, is used to construct the chemical compounds of the invention. The specification describes chemical compounds which have an affinity for a phospholipid. The chemical compounds which have an affinity for a phospholipid. The chemical compounds comprise at least one chemical platform comprising six residues supporting a set of chemical functions that are capable of binding to the phospholipid and at least partly define the affinity of the structure for the phospholipid. The compounds act as phospholipid sequesters. The compounds are useful for preparing antithrombotic, antitumor and antiniflammatory medicaments, for making coatings for thrombogenic biomaterials, and for preparing labelling compounds useful for analysing and detecting negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä

cell growth, regulation involved in a variety of cellular functions including signal transduction involved in a variety of cellular functions including cell growth, regulation of gene expression and ion channel activity. The localisation of different PKC isozymes to different areas of the cell in turn appears due to binding of the activated isozymes to the specific anchoring molecules (RACKS) Peptides that minic either the PKC-binding site on PKC are isozyme specific translocation inhibitors of PKC. The disclosed peptides are useful in activating or inhibiting translocation or function of deltaPKC. The deltaPKC agonists or antagonists are useful in reducing, enhancing or protecting against damage to cells or tissues due to ischaemic or hypoxic event caused by stroke, Acute administration of the peptides, conjugated to a carrier peptide or a Tat-derived peptide, protected hearts against ischaemic damage as shown by decreased release of creatine kinase. The date indicate that in an intext heart, inhibition of deltaPKC conferred greater than 50% protection against ischaemic damage. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                187

Annexin V, which has high affinity for active thrombocytes, is used as a carrier molecule to build a thrombus trargeting thrombolytic fusion protein. The protein (this sequence) is the result of expression of a fusion gene comprising the Annexin V gene and a low-molecular urckinase gene, in insect cells. The Annexin V-scu-PA-32 fusion protein, expressed in insect cell strain Tn-5B1-4, has high affinity for active thrombocytes and has the fibrinolytic activity of urokinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           521 VKSIRSIPAYLAETLYYAMKGAGTDDHTLIRVMVSRSEIDLFNIRKEFRKNFATSLYSMI 580

                                                                                                                                                                                                                                                                     indicating that PAP-I is probably not constitutively secreted. The Met residue is removed at in a post-translational event and the newly formed NH2-terminal Ala residue is blocked by acetylation. It binds to phospholipid and inhibits phopholipase A2. The protein can substitute heparin or other anticoagulants in the treatment of disseminated intravascular coagulation, deep vein thrombosis, or other disorders. It also has antiinflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                             The invention relates to eye drops contain CPB-I (anexin V) and a polyhydric alcohol having a carbonyl value of not more than 5micro Mol./g. The eyes drops are for treating e.g. corneal diseases. Such eye drops are without unpleasant irritation upon dropping but with satisfactory long-term storage stability. The present sequence is the human CPB-I (calcium/phospholipid binding) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GRDLLDDLKSELTGKFEKLIVALMKPSRLYDAYELKHALKGAGTNEKVLTEIIASRTPEE

BIOPASS. Acta 1160:76-83(1992).

-I-FUNCTION: THIS PROTEIN IS AN ANTICCAGULANT PROTEIN THAT ACTS.
AN INDIRECT INHIBITON OF THE THROMBOLASTIN-SPECIFIC COMPLEX,
WHICH IS INVOLVED IN THE BLOOD COAGULATION CASCADE.

-I-DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.

-I-SIMILARITY: GENERAL 4 annexIN FAMILY.

-I-SIMILARITY: CONTAINS 4 annexIN repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Learmonth M.P., Howell S.A., Harris A.C.M., Amess B., Patel Y., Glambanco I., Blanchi R., Pula G., Ceccarelli P., Donato R., Green B.N., Aitken A., "Novel isoforms of CabP 33/37 (annexin V).from mammallan brain: structural and phosphorylation differences that suggest distinct blological roles."

-- SUBJUNT: MONOMER. BINDS ATRX (By similarity).
-- DOMAIN: A Pair of annexin repeats may form one binding site for calcium and phospholipid.
-- SIMILARITY: BELONGS TO THE ANDEXIN FAMILY.
-- SIMILARITY: CONTAINS 4 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PROSITE; PS00223; ANNEXIN; 4.

with highly hydrophilic peptide structure.";
J. Neurochem. 67:89-97(1996).
I. FUNCTION: THIS PROTEIN IS AN ANTICOACULANT PROTEIN THAT ACTS AS AN INDIRECT INHIBITOR OF THE THROMBOPLASTIN-SPECIFIC COMPLEX, WHICH IS INVOLVED IN THE BLOOD COAGULATION CASCADE.
I. SUBUNIT: MONOMER. Binds ATRX and DNWT1.
I. DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
I. SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
II SIMILARITY: Contains 4 annexin repeats.
                                                                                            This SWISS-PROT entry is copyright. | Function: Colladgen BinDing PROTEIN.
| FUNCTION: Colladgen BinDing PROTEIN.
| DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
| SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
| SIMILARITY: Contains 4 annexin repeats.
                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- PTM: PHOSPHORYLATED IN RESPONSE TO GROWTH FACTOR STIMULATION.
-!- MISCELLANDEDUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY.
-!- SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
-!- SIMILARITY: CONTAINS 8 ANNEXIN FE

    -!- DOMAIN: A pair of annexin repeats may form one binding site for
calcium and phospholipid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      J. J. Blochem. 177:21-27(1988).
-!- FUNCTION: MAY ASSOCIATE WITH CD21. MAY REGULATE THE RELEASE OF CA(2+) FROM INTRACELLULAR STORES.
-!- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-!- MISCELLAMBOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY: SIMILARITY: COntains 0 annexin repeats.
01-APR-1990 (Rel. 14, Last sequence update)

-1- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-1- MISCELLANEOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY.
-1- SIMILARITY: BELLONGS TO THE ANNEXIN FAMILY.
-1- SIMILARITY: CONTAINS 4 annexin repeats.

CA(2+) FROM INTRACELLULAR STORES.

DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.

MISCELLAMEDOS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY.

SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.

SIMILARITY: Contains 8 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                            ö

Submitted (JAN-1997) to the EMBL/Genbank/DDBJ databases.
-1-FUNCTION: CALCIUM/PHOSPHOLIPID-BINDING PROTEIN WHICH PRONOTES
MEMBRANE FUSION AND IS INVOLVED IN EXOCYTOSIS (BY SIMILARITY).
-1-DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-1-MISCELLANBOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY (BY SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
-1-SIMILARITY: COntains 4 annexin repeats.

-1- DOMAIN: A PAIR OF ANNEXIN REPEATS MAY FORM ONE CALCIUM AND PHOSPHOLIPID (BY SIMILARITY).

-1- SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.

-1- SIMILARITY: CONTAINS 4 ANNEXIN REPEATS.
